

CHEMICAL ARRAYS ON A COMMON CARRIER

5

ABSTRACT

A set of chemical arrays held together by a common carrier with one or more arrays of the set having been previously exposed to a sample. In one embodiment the
10 common carrier optionally includes an indication of locations along which the carrier should be separated so as to separate the set of chemical arrays into multiple sub-sets each with one or more arrays. A method of use may include separating the set of chemical arrays into multiple sub-sets each with one or more arrays.
